1. Introduction

This specification provides the definition of the Multiple payment order message (PAYMUL) to be used in Electronic Data Interchange (EDI) between trading partners involved in administration, commerce and transport.

1.1. Scope

1.1.1. Functional Definition

A Multiple Payment order is sent by the Ordering Customer (or Payor or Agent on behalf of the Ordering Customer) to the Ordered Bank, to instruct the Ordered Bank to debit an account it services for the Ordering Customer, and to arrange for the payment of specified amounts to several Beneficiaries (or Payees) in settlement of the referenced business transaction(s).

Throughout this document, the term 'Ordering Customer' refers to either an Ordering Customer, or a Payor or Agent acting (sending) on behalf of the Ordering Customer; likewise the term 'Beneficiary' refers to either a Beneficiary, or a Payee or Agent acting on behalf of the Beneficiary.

1.1.2. Field of Application

This message may be applied for both national and international settlements. It is based on universal practice and is not dependent on the type of business or industry.

1.1.3. Principles

- A Multiple Payment Order may cover the financial settlement of one or more commercial trade transactions such as invoices credit notes, debit notes etc. It is not intended for use in securities trading.
- Charges may be borne on account(s) different of the account(s) held by the Ordering Customer.
- Several debit accounts, execution dates and currencies may be specified.
- The Ordered Bank may need a confirmation/authorisation (e.g. AUTHOR message) to be allowed to process the Multiple Payment Order message.
- The only way to modify a Multiple Payment Order message is to cancel the whole message or part thereof (e.g. by the use of the FINCAN message). In that respect, one to many order(s) could be cancelled within the message, avoiding to be obliged to cancel the whole message.

1.3. Data Segment Clarification

The following semantic principles applying to the message are intended to facilitate the understanding of the message:

The Multiple Payment Order message is structured in three levels:

- A level contains data related to the whole message and is contained in Segment Group 1 and Segment Group 2 and the Heading section.
- B level contains data from the debit side (one debit account, one currency, one execution date) and data which applies to all further details of C level(s) and is contained in Segment Group 3 through Segment Group 9.

- C level contains mainly data related to the credit side, and this data is considered as unique for each payment transaction and is contained in Segment Group 10 through Segment Group 21.

The structure of the message is designed to allow several B levels, each B level being followed by its related C levels.

Where a choice of code or text is given only the code element should be used wherever possible.

1.4. Rules for segments FII and NAD

1.4.1. Dependencies of FII and NAD relevant for transactions in PAYMUL and DIRDEB D.96A

	PAYMUL level B Party Qualifier (DE 3035)	PAYMUL level C Party Qualifier (DE 3035)	DIRDEB level B Party Qualifier (DE 3035)	DIRDEB level C Party Qualifier (DE 3035)

3. Segment Layout

3.1. Introduction

This section describes each segment of the UN/EDIFACT message PAYMUL.

Each segment is presented in a separate table and in the sequence in which they appear in the message.

The upper half of each table provides information about the segment or segment group concerned, the lower part of the table describes the data elements (composite and simple).

Each table is structured in three vertical blocks: UN/EDIFACT Directory 96.A, D6 and CRG:

3.1.1. UN/EDIFACT Directory 96.A Block

The left third of the table provides information extracted from the original UN/EDIFACT Directory 96.A.

In the first line of this block, the segment or segment group tag is followed by the maximum number of occurrences.

The second line contains the (M)andatory / (C)onditional indicator at segment level, according to the UN/EDIFACT Directory 96.A

In the lower half of the table, the data element tag (composite or simple) and full name are followed by the corresponding (M)andatory / (C)onditional indicators and the format.

3.1.2. D6 Description Block

This block presents the recommendations of D6 (EWG sub-working group Finance).

Both for segment level and for data element level (simple and composite), the following status/sub-status are defined:

M	MANDATORY	The entity is mandatory and must be sent (according to directory, unchanged)
R	REQUIRED	The entity is required and must be sent
D	DEPENDENT	The entity must be sent in certain conditions, as defined by the relevant explanatory note
O	OPTIONAL	The entity is optional and may be sent at the discretion of the user
N	NOT USED	The entity is not used and should be omitted. Any data placed in an element marked with N will be ignored.

At data element level:

- The first column indicates the status as defined above (with the options M, R, D, O, N);
- The second column includes information affecting the code values as follows:

*	Restricted codelist	Code values preceded by an asterisk (*) are the only codes available for use in the given context
<blank>	Open codelist	Code values not preceded by an asterisk (*) are not restricted (they are open). The available codes are listed in the codelist of the corresponding UN/EDIFACT directory.
* R	Required code in a restricted list	Codes preceded by an “R” are required and must occur in one repetition of the corresponding segment if used.
R	Required code in an open list	Codes preceded by an “R” are required and must occur in one repetition of the corresponding segment if used.

- The third column provides additional comments and descriptions.

Note that if a segment group/segment/composite data element is flagged as “N”, all data elements within that segment group/segment/composite data element will have blank status indicators.

3.1.3. CRG Description Block

The last block of the table describes the preferred use of the message for a group of multinational companies constituting the "Corporate Reference Group" (CRG). The CRG is established as a forum for discussions of standardisation issues. The members of the group are predominantly companies with activities in several countries and a large resource base.

A segment identifying certain characteristics of the payment orders stored on level C, such as business function.		The absence of this segment means that all the transactions within this B-level are (domestic) clean payments.		This segment should not be used because ideally the distinction between domestic and international payments should be done on transaction/C-level (e.g., currency, bank identification, country code). Currently, this is not possible due to legal/regulatory limitations in some countries and it may be necessary to identify whether the batch is domestic or international within this BUS segment. However, this is not desirable in the long term.

A group of segments containing the beneficiary's bank and the account and if necessary up to two intermediary banks.	If no sufficient bank information is available, a fully qualified SG 13 – NAD segment must be used.		
FII - 1 Financial institution information			
UN/EDIFACT Directory 96.A M	D6	M	CRG M
A segment identifying the financial institution and relevant account number with the currency.	A segment containing the account servicing bank including the account to be credited and other necessary bank information.		Bank account definition varies with countries as it sometimes includes the national bank/branching sorting code and sometimes not, often leading to errors. The correct implementation is to have one single string. However for the time being it can be split if agreed nationally. Please also refer to CRG document with examples (available at http://cm.sfs.siemens.de/crg/migs/fii-seg.doc).
